

LOCATION TRAFFIC PROFILE

Spadina Ave — Concord Frontage

Retail unit frontage · King West / Fort York, Toronto

PREPARED FOR

[Broker / Client]

CAPTURE

Jul 16, 2026 · 18:09

SAMPLE

2.9 minutes

REPORT

SL-0416

At weekday evening peak, roughly **620 vehicles** and **430 people** pass this frontage every hour — a moderate, mixed-traffic corner where vehicle exposure modestly outweighs foot traffic.

VEHICLES

30

≈ 621 / hour

projected from a 2.9-min sample

28 cars · 1 motorcycle · 1 bicycle · confidence 0.65

PEDESTRIANS

21

≈ 434 / hour

projected from a 2.9-min sample

walking the retail frontage · confidence 0.63

What this means for the space

This frontage sits on a corridor with steady vehicle traffic and a lighter but consistent pedestrian stream. For a tenant, that profile favours uses that convert drive-by visibility — signage, quick-stop retail, service businesses — over those that depend purely on heavy walk-in footfall.

The vehicle-to-pedestrian ratio here runs roughly 3 : 2, distinct from pedestrian-dominant corners nearby where that ratio inverts. Matching the tenant to the corner's actual traffic type is the difference this measurement makes.

How it was measured

- Aerial video captured over the public street at an oblique angle — steep enough to separate objects, shallow enough for reliable detection.
- Objects detected and tracked frame to frame, counted once as each crosses the line, then converted to an hourly rate from the stated window.
- People and vehicles measured **in aggregate only** — no faces, no plates, no identification of any individual.

Reading the numbers honestly

WHAT THIS REPORT IS — AND IS NOT

- A **single-window sample** (2.9 min at evening peak), projected to an hour for comparison — not a multi-day average.
- A strong directional estimate for a leasing decision — not a certified, court-defensible traffic study.
- Dense moments run **conservative**: overlapping people can merge and go uncounted, so pedestrian figures are a floor.
- A multi-window profile (peak vs. off-peak) captures how the corner behaves across the full day.

Go deeper on this location

PACKAGE	WHAT IT ADDS	FROM
Snapshot	This report — one location, one window	\$300
Profile	Same frontage at peak vs. off-peak — the daily curve	\$700
Corridor	Several units along the block, compared	\$2,000
